LinkedIn Profile

CORE COMPETENCIES

- Programme & Schedule Management
- Project Controls & Reporting
- KPI & Client Reporting
- Data Integrity & Automation
- Process Improvement

TECHNICAL SKILLS

- Advanced Excel & Power BI
- Python (automation, Streamlit, SQLite)
- Materials science & electrochemistry
- Statistical analysis & reporting

EDUCATION

Micro & Nanotechnology Engineering
FCT NOVA (UNL), Portugal

Master's Thesis in Nanomaterials
Politecnico di Torino, Italy | 19/20

LANGUAGES

Portuguese — Native
English — Advanced

INTERESTS

Padel, Cooking, Reading, Martial Arts

OHL Planning & Project Controls Engineer

Outage Planning · Project Controls · KPI Reporting · Python Automation

A results-driven Planning & Project Controls Engineer with a strong foundation in applied research and development, I specialise in directing complex engineering programs, driving operational performance, and delivering strategic technical initiatives. In my current role at Gaeltec Utilities UK, I oversee end-to-end Overhead Line (OHL) program planning, performance tracking, and client reporting across major utility network contracts. I establish robust project controls to eliminate schedule slippage, manage commercial variations, and leverage digital tools to optimise productivity — notably leading client-critical compliance and risk-mitigation programs to final sign-off. This capacity for operational rigor and data-driven leadership is rooted in an extensive background as an R&D Engineer, where I led high-impact energy storage projects, generated patented intellectual property, and mentored advanced academic researchers. By combining high-level analytical capability with cross-functional leadership, I consistently deliver complex projects on target while ensuring strict contractual compliance and performance excellence.

PROFESSIONAL EXPERIENCE

Gaeltec Utilities

2025 – Present

SP Energy Networks OHL framework, on behalf of [ScottishPower](#) | Scotland

→ OHL Planning & Project Controls Engineer
→ Planning Engineer

Sept 2026 – Present
2025 – Sept 2026

Following a career progression at Gaeltec Utilities UK from Planning Engineer to OHL Planning & Project Controls Engineer, I oversee end-to-end Overhead Line program planning, performance tracking, and client reporting across major utility network contracts. I establish robust project controls to eliminate schedule slippage, manage commercial variations, and leverage digital tools like Excel and Power BI to optimise productivity — notably leading client-critical compliance and risk-mitigation programs to final sign-off. This capacity for operational rigor and data-driven leadership is rooted in an extensive background as an R&D Engineer, where I led high-impact energy storage projects, generated patented intellectual property, and mentored advanced academic researchers. By combining high-level analytical capability with cross-functional leadership, I consistently deliver complex projects on target while ensuring strict contractual compliance and performance excellence.

- **Programme & Schedule Management:** develop and maintain OHL project schedules, aligning permits, access, materials and field resources to ensure on-time delivery and minimise operational risk.
- **SPEN Hazards & Defects Management:** lead the end-to-end lifecycle of the SPEN Hazards & Defects Programme — logging, site allocation, field inspections, evidence verification and final compliance sign-off.
- **Project Controls & Variation Tracking:** perform planned-vs-actual variance and look-ahead analyses; capture scope changes and schedule revisions to safeguard commercial margins and audit traceability.
- **KPI & Performance Reporting:** produce weekly/monthly executive dashboards and trend reports, giving management and clients actionable intelligence on outputs, right-first-time evidence and resource forecasting.
- **Digital Systems & Process Optimisation:** integrate and validate data across Excel and Power BI to automate workflows, support ISO 27001 data compliance, and standardise project controls across teams.
- **Automation & Reporting Tools:** built the company's first Python/Streamlit dashboards for job tracking and costing, plus a searchable SQLite database of Target Price project data across three operating areas.

R&D Engineer | [VGColab](#)

2019 – 2025

Porto, Portugal

Innovative R&D engineer specialising in next-generation energy storage — sodium-ion batteries and supercapacitors — directing FCT-funded projects, developing novel electrode/electrolyte materials and securing intellectual property, alongside academic mentorship at Master's and Ph.D. level.

- **R&D leadership & mentorship:** planned and executed internal roadmaps and FCT projects; taught coursework and provided conceptual direction and thesis supervision for Master's and Ph.D. students.
- **Material innovation (Project Hydes):** engineered high-energy-density electrolytes and free-standing electrodes for EDLC supercapacitors, plus novel cathode and anode materials for sodium-ion batteries.
- **Characterisation & analytics:** advanced morphological and electrochemical testing (XRD, SEM, BET, TGA, CV, EIS, GCD) to evaluate degradation, optimise cycle life and enhance cell performance.
- **IP & dissemination:** co-inventor on 2 pending patents in energy-storage formulations; presented research at international scientific conferences.

Quality Control Engineer | [CSP – Componentes Semicondutores](#)

2017

Applied statistical analysis to products and equipment to monitor quality; Lisbon, Portugal.

Additional experience: Concession vendor, 2east (international events across Europe), 2012 – 2025.
